Plan

Where the money goes Jul-Sep 2026, per month

Housing	\$2,985
Food	\$1,514
Kids	\$1,400
Shopping	\$785
Other	\$405
Left over	\$4,728

✓ Plan needs \$3,156 of the \$4,728 left over each month.

Goals

bar = progress to plan · amount = monthly to stay on it

Retire at 65 Oct 2050 (in 24 yrs) \$132	Emergency fund now \$1,176
Lasts to 95 in 89% of markets; target 90%	\$32,000 of \$46,112
College, older child Sep 2035 (in 9 yrs) \$634	College, younger child Sep 2039 (in 13 yrs) \$279
On today's habits: 28% by the start (\$81,940 short)	No 529 yet: 0% (\$56,626 short)
Mortgage paid off by age 60, Oct 2045 \$53	Replace the minivan Oct 2029 (in 3 yrs) \$882
Paid off Aug 2047 (age 61¼) at today's payment	Nothing set aside yet (\$32,000 short)

Top decisions

- Give the ~\$4K/mo left over a job. After the plan's \$3K/mo, about \$1K/mo remains. Unless it's moved on purpose, it tends to get spent: the surplus is \$1.94M if it's saved, \$484K if it's spent.
- Start wills, name a guardian, and check beneficiaries on every account and policy. The biggest gap, and the cheapest to fix.

4 more under All decisions

What we own and what we owe (explicit balance sheet)

synced pulled from the account by Foliome stated told to us, not synced Accounts with less than \$1 are left out.

WHAT WE OWN	OWNER	TAX TREATMENT	SOURCE	VALUE

less estimated tax when 401(k)/IRA money is withdrawn (20.0%)			estimate	-\$73,400
less cost to sell the house (6.0%)			estimate	-\$38,400
Net worth, after those costs				\$652,100

Each month: cash in and cash out (actual, Jul 1 – Sep 30, 2026 (3 months), per month)

Cash out is real money leaving the accounts Foliome syncs. Payments that build equity, like mortgage principal, still count, because the cash leaves the account. Cash in is the whole household. It's actual where Foliome can see it, and estimated from pay, deductions and taxes where it can't (see Taxes and take-home). The plan uses a longer 6-month average (Apr 1 – Sep 30, 2026 (6 months)) so twice-a-year bills like property tax are spread out; it's shown alongside.

CASH IN	PER MONTH	SUMMARY	PER MONTH	6 - MO AVG
Paychecks (actual) synced	\$11,126	Cash in	\$11,817	\$11,817
Interest synced	\$48	Cash out (synced accounts)	-\$7,089	-\$7,685
Alex's bonus after tax, averaged estimate	\$643	Left over: spent or saved where Foliome can't see	\$4,728	\$4,131
Total in	\$11,817	Housing alone is 25% of household cash in.		

CASH OUT	NOTE	PER MONTH	6 - MO AVG
Housing		\$2,985	\$3,633
Mortgage	Full payment, all of it cash out	\$2,650	\$2,650
Utilities		\$335	\$333
Kids		\$1,400	\$1,400
Childcare		\$1,400	\$1,400
Insurance		\$310	\$310
Insurance		\$310	\$310
Food		\$1,514	\$1,497
Groceries		\$1,079	\$1,073

Total cash out		\$7,089	\$7,685

All household accounts are synced except Sam's 403(b).

Where the money comes from and goes (annual, the whole household, today's dollars)

COMING IN	SOURCE	PER YEAR
Alex: Base salary	paystub	\$118,000
Alex: Annual bonus (10% target)	offer letter	\$11,800
Alex: 401(k) match (4%)	benefits guide	\$4,720
Sam: Salary	paystub	\$76,000
Gross pay and match		\$210,520
GOING OUT	SOURCE	PER YEAR
Everyday spending we can see (excl. mortgage and childcare)	synced last 6 months, annualized	\$43,625
Mortgage payment (full, until payoff)	synced	\$31,800
Childcare (until about Oct 2030)	synced	\$16,800
Retirement contributions from pay	estimate 401(k) + 403(b) + match	\$22,720
DOES IT TIE OUT?		PER YEAR
Take-home after tax (21.6% of gross) and pre-tax deductions	estimate	\$143,410
less everything above (cash out we can see)		-\$92,225
Not accounted for: either saved where Foliome can't see it, or spent		\$51,186

Taxes and take-home (how gross pay becomes cash)

Taxes and paycheck deductions estimated with 2026 tax tables, married filing jointly, CO at a flat 5% estimate

	ALEX	SAM	HOUSEHOLD
Gross pay	\$129,800	\$76,000	\$205,800
less 401(k) deferral	-\$12,000		-\$12,000
less 403(b) deferral		-\$6,000	-\$6,000
less Federal income tax	-\$12,079	-\$7,177	-\$19,256
less State income tax	-\$5,890	-\$3,500	-\$9,390
less Social Security	-\$8,048	-\$4,712	-\$12,760
less Medicare	-\$1,882	-\$1,102	-\$2,984
less State disability (SDI)	-\$0	-\$0	-\$0
Take-home	\$89,902	\$53,509	\$143,410
Per month	\$7,492	\$4,459	\$11,951

Check against real paychecks: the model estimates Alex's base-pay take-home at \$81,639/yr. Actual deposits are \$76,032/yr (payroll deposits), so the estimate is 7.4% higher.

Spending is modelled in phases, not as one flat number. Everyday spending (\$43,625/yr including the placeholder) continues for life. The mortgage stops at payoff and childcare stops when the kids are older. See the retirement page for each phase.

Liquidity

NEED	AMOUNT	COVERED BY
Emergency reserve	\$32,000	Emergency savings: funded
Monthly cash out (actual, see "Each month")	\$7,685	Pay. Cash on hand covers 5 months.
Card balances due this cycle	\$2,300	Paid from cash on hand
Illiquid: home equity	\$255,000	Not available without selling or borrowing

The Goals: Today vs. Plan

✓ On track ⚠ Behind plan — still to go Full bar = 100% of the plan

⚠ Retire at 65

ESSENTIAL · OCT 2050 (IN 24 YRS)

Stop working at 65 and spend \$3,635/mo after tax (today's dollars), plus health insurance until Medicare, through age 95.

Today: lasts to 95 in 89% of markets (target 90%)

Each month: \$132 more on top of today's \$1,893

Retire earlier or later: 60: 70% · 67: 93%

How sure: 89% of markets with forward assumptions; 62% if returns run 2 pts lower; 92.3% with history, trimmed. Safe spend \$3,503/mo.

⚠ Emergency fund

ESSENTIAL · NOW

6 months of actual cash out (\$46,112), kept in cash.

Today: \$32,000 (69%)

Each month: \$1,176 for 12 months

Markets: held in cash

How sure: Held in cash, so markets don't touch it.

⚠ College, older child

IMPORTANT · SEP 2035 (IN 9 YRS)

public in-state: \$30,000/yr for 4 years, starting Sep 2035 (\$113,253 needed then).

Today: \$31,313 by then (28%)

Each month: \$634 into the 529

If we wait: 1 yr \$728 · 2 yr \$849

How sure: Assumes 4.0% a year of real growth and public in-state cost of \$30,000/yr. Other choices: private nonprofit \$63,000/yr, half of public in-state \$15,000/yr.

⚠ College, younger child

IMPORTANT · SEP 2039 (IN 13 YRS)

half of public in-state: \$15,000/yr for 4 years, starting Sep 2039 (\$56,626 needed then).

Today: no 529 yet (0%)

Each month: \$279 into a new 529

If we wait: 1 yr \$308 · 2 yr \$344

How sure: Assumes 4.0% a year of real growth and half of public in-state cost of \$15,000/yr. Other choices: public in-state \$30,000/yr, private nonprofit \$63,000/yr.

⚠ Mortgage paid off

IMPORTANT · BY AGE 60, OCT 2045

Pay off \$385,000 at ~5.8% by Alex's 60th birthday (Oct 2045).

Today's payment: paid off Aug 2047 (age 61¾)

Each month: \$53 extra principal

Interest to go: \$275,371

How sure: Fixed-rate debt: no market risk. Paying it down earns the loan rate, guaranteed.

⚠ Replace the minivan

WANT · OCT 2029 (IN 3 YRS)

\$32,000 (today's dollars) by Oct 2029.

Today: nothing set aside

Each month: \$882, kept in cash

If we wait: 1 yr \$1,327

How sure: Assumes 0.5% a year of real growth.

What we need to do each month (the action plan)

For each goal, this is the monthly amount that keeps it on track, in today's dollars. Raise each amount with inflation every year, and check it at each quarterly review.

GOAL	STATUS	PER MONTH	PER YEAR	WHAT TO DO
College, older child public in-state \$30K/yr × 4, starting Sep 2035; 4.0% real return	on its way	\$634	\$7,604	Add to the existing 529
College, younger child half of public in-state \$15K/yr × 4, starting Sep 2039; 4.0% real return	account not opened	\$279	\$3,345	Open a 529, then automate this monthly
Retire at 65, spending \$44K/yr after tax (+ health until Medicare) to 95 \$405K today + \$23K/yr → typical \$2.14M at 65. Safe spend about \$4K/mo after tax. No Social Security or pension counted.	short: lasts in 89%	\$132	\$1,581	Save \$132/mo more for retirement, on top of today's \$2K/mo
Emergency fund: 6 months of cash out 6 × \$8K/mo actual cash out	below target	\$1,176	\$14,112	Top up \$14K over 12 months
Property tax (two installments) already inside monthly cash out	set aside monthly	\$650	\$7,800	Set aside monthly so the installments are never a surprise (already counted in cash out)
Replace the minivan \$32,000 by Oct 2029; 0.5% real return (cash, short horizon)	not started	\$882	\$10,589	Set aside monthly in cash
Mortgage paid off \$385,000 at ~5.8%; at \$2,650/mo it's paid off in 20.8 yrs	behind	\$53	\$636	Raise the payment to \$2,703/mo
New money needed each month for goals		\$3,156	\$37,868	

Can the monthly cash flow carry it?

	PER MONTH
Household cash in (actual + estimated)	\$11,817
Cash out today (synced accounts, mortgage included)	-\$7,685
Retirement contributions (already taken from pay, before cash in)	—
New goal contributions (above)	-\$3,156
Left after goals: everyday spending we can't see, plus extra saving	\$976

The goals fit. After funding them, about **\$976/mo** remains, mostly on the side Foliome can't see. Whatever part of it isn't spent is extra saving: it goes to taxable investing, paying the mortgage down faster, or retiring earlier.

Today’s path vs. the plan (same markets; only our actions differ)

needed change nothing with the plan College bars in today's dollars

Today’s path means nothing changes: same paychecks, same retirement contributions, same spending, no new 529 money, no will. **The plan** is today's path plus the actions on the previous page. Both use the same market assumptions.

OUTCOME	IF WE CHANGE NOTHING	IF WE FOLLOW THE PLAN	WHAT THE PLAN CHANGES
College, older child needed at 18: \$113,253	\$31,313 saved (28%). Short \$81,940.	Fully funded	\$634/mo from now
College, younger child needed at 18: \$56,626	\$0 saved (0%). Short \$56,626.	Fully funded	\$279/mo from now
Retirement at 65	Typical \$2.14M, lasts to 95 in 89%	Same	Nothing. Today's contributions are already enough.
Safe spend in retirement	\$3,503/mo	Same	—
Money left each month (after cash out; spent or saved where we can't see)	\$4,131/mo	\$1,107/mo	\$3,024/mo goes to the 529s
If something happens to us	Partly in place. A court decides guardianship.	Wills, guardian named, beneficiaries checked	One-time legal cost, no monthly cost

College at 18: needed vs. saved

The cost of waiting

START THE 529 CONTRIBUTIONS...	OLDER CHILD	YOUNGER CHILD
now	\$634/mo	\$279/mo
in 1 yr	\$728/mo	\$308/mo
in 2 yrs	\$849/mo	\$344/mo
in 4 yrs	\$1,238/mo	\$438/mo

The total shortfall if nothing changes is **\$138,566** in today's dollars. That's what the kids would borrow, or what we'd pay out of pocket in those years.

The bottom line: What doesn't happen on its own: retirement, the emergency fund, college for the older child, college for the younger child, paying off the mortgage, replace the minivan and the estate paperwork. The plan costs \$3,156/mo out of the ~\$4,131/mo left over today.

All decisions for this review

Most important first. Page 1 shows the top two.

1. Give the ~\$4K/mo left over a job. After the plan's \$3K/mo, about \$1K/mo remains. Unless it's moved on purpose, it tends to get spent: the surplus is \$1.94M if it's saved, \$484K if it's spent.
2. Start wills, name a guardian, and check beneficiaries on every account and policy. The biggest gap, and the cheapest to fix.
3. Open a 529 for "younger child" and automate \$279/mo.
4. Choose a college target per child (in-state public, private, or a share). It moves the education numbers more than anything else.
5. Life insurance: Alex has \$750K of cover against about \$1.88M of future earnings; Sam has \$400K of cover against about \$1.03M of future earnings. Is that enough if either income stopped?
6. Pick a realistic number of years before Alex leaves salaried work. The plan shows 5 and 10 as examples.

Retirement: how the plan grows (retirement accounts only, today's dollars)

— Retire at 65, typical 1-in-10 to 9-in-10 markets - - Retire at 60 - - Retire at 67
..... History, trimmed (1928–2025 replay), typical (gold shading: its 1-in-10 to 9-in-10; lasts to 95 in 92.3%)

Capped near the top; good-market paths go higher

If we keep contributing as planned, this is how the retirement accounts grow until 65 and then pay for retirement to 95. The dark line is the typical outcome. The shaded band runs from a bad market (1 in 10) to a good one (9 in 10).

AT 65, TYPICAL

\$2.14M

Bad market \$1.05M · good market \$4.56M. Today: \$405K, plus \$23K/yr until then.

SAFE TO SPEND IN RETIREMENT

\$3,503/mo

After tax, in today's dollars, and lasts to 95 in 90% of markets. The plan needs \$3,635/mo, plus health insurance until Medicare.

DOES THE MONEY LAST TO 95?

89% of markets

62% if returns run 2 pts/yr lower than assumed (a conservative setting).

RETIRE EARLIER OR LATER

60: 70% · 65: 89% · 67: 93%

Chance the money lasts, by retirement age. Typical balance at retirement: 60 → \$1.62M, 65 → \$2.14M, 67 → \$2.37M.

Spending over our lifetime, and the other pieces (modelled separately)

PHASE	WHAT'S IN IT	PER YEAR	PER MONTH
Today	everything, incl. mortgage and childcare	\$92,225	\$7,685
Childcare ends (Oct 2030)	mortgage still running	\$72,546	\$6,046
Mortgage paid off (Aug 2047)	core spending only	\$43,625	\$3,635
Retired at 65	core + health insurance until Medicare	\$55,625	\$4,635

Mortgage at ~5.8% (implied by the payment and payoff date), paid off in 21 years. In retirement, withdrawals are increased by 15.0% to cover tax on money drawn from tax-deferred accounts.

Grows on the action-plan contributions, then pays 4 years per child.

Held, not invested. ~0.5% real.

Climbs as the mortgage is paid down; flat after payoff. Not counted as spending money.

What this does and doesn't count

- Counts: retirement accounts today, plus the contributions already coming out of pay.
- Not counted: any extra saving from the money left after goals (action plan), any pension, or Social Security. All of these would push the lines up.
- Returns per account: Rollover IRA ...2002 4.2%, Roth IRA ...2003 4.7%, Workplace 401(k) ...3001 3.8%, Sam's 403(b) 3.5%, treated as typical compound growth. 55-year simulation, 3,000 paths, with all accounts hit by the same market each year.
- History, trimmed (1928–2025 replay): Replays real annual returns from 1928–2025 in random 5-year runs (3,000 paths), with stock returns cut 2 pts/yr. Each account follows its own stock / bond / cash mix. Sources: Damodaran (NYU Stern) annual returns; FRED CPI.
- Two outlooks: this page's plan uses **forward assumptions** (typical real returns of 4.2% to 4.7% to 3.8% to 3.5%), which give 89% at 65. **History, trimmed** replays past markets with returns cut 2 pts/yr and gives 92.3%. The difference is mostly the return level. Smooth simulated markets also slightly understate runs of bad years.
- Social Security, uncertain and so left out on purpose, would add income from 62–70.

What each goal costs today, and which money is for what (goals-based subportfolios)

Each goal is valued in today's dollars and discounted at a rate that matches how certain it needs to be. The more essential the goal, the lower the rate, and the more it costs today.

#	GOAL	TIER	RATE	COST TODAY	SET ASIDE
1	Everyday spending, \$44K/yr for 56 yrs (excl. mortgage and childcare)	essential	2.8%	\$1,243,205	Paid from earnings, then savings
2	Childcare, \$17K/yr for 4 yrs	essential	2.8%	\$63,619	Paid from earnings, then savings
3	Mortgage interest until payoff in 21 yrs (principal is on the debt side)	essential	2.8%	\$195,124	Paid from earnings, then savings
4	Health insurance from retirement until Medicare	essential	2.8%	\$5,934	Paid from earnings, then savings
5	College, older child (public in-state, \$30K/yr × 4)	important	4.0%	\$78,025	\$22,000 in a 529 (28%)
6	College, younger child (half of public in-state, \$15K/yr × 4)	important	4.0%	\$33,348	\$0 in a 529 (0%)

Which money is for what

BUCKET	PURPOSE	WHAT SITS THERE NOW	AMOUNT
Safety	About 5 years of essential spending, near-zero risk. Bad markets don't touch it.	Cash, joint savings, the house (mortgaged)	\$36,200
Market	Long-term lifestyle and retirement. Diversified stocks and bonds.	401(k), IRAs, deferred comp, 529	\$475,000
Aspirational	Concentrated bets and ventures. Fine to lose.	side business (counted at \$0), concentrated positions	—

Method: goals-based subportfolios (Brunel) and safety / market / aspirational risk buckets (Chhabra). Bucket sizing isn't set yet.

The full picture (family extended balance sheet)

 estimate Each row is a present value: future money, discounted to today at the rate shown

ASSETS	VALUE	LIABILITIES AND SURPLUS	VALUE
Explicit	\$1,151,200	Explicit	\$499,100
Accounts and home (see What we own and what we owe)	\$1,151,200	Mortgage and cards	\$387,300
		Tax owed on tax-deferred accounts	\$73,400
		Cost to sell the house	\$38,400
Implicit: future earnings to 65	\$2,910,152	Implicit: what we've committed to spend	\$1,619,256
Alex: Base salary (25 yrs @ 4.0%)	\$1,667,285	Everyday spending, \$44K/yr for 56 yrs (excl. mortgage and childcare) @ 2.8%	\$1,243,205
Alex: Annual bonus (10% target) (25 yrs @ 6.5%)	\$130,191	Childcare, \$17K/yr for 4 yrs @ 2.8%	\$63,619
Alex: 401(k) match (4%) (25 yrs @ 4.0%)	\$87,387	Mortgage interest until payoff in 21 yrs (principal is on the debt side) @ 2.8%	\$195,124
Sam: Salary (25 yrs @ 3.8%)	\$1,025,290	Health insurance from retirement until Medicare @ 2.8%	\$5,934
Social Security not valued yet	—	College, older child (public in-state, \$30K/yr × 4) @ 4.0%	\$78,025
		College, younger child (half of public in-state, \$15K/yr × 4) @ 4.0%	\$33,348
Total assets	\$4,061,352	Total liabilities	\$2,118,356
		Surplus (discretionary wealth)	\$1,942,997

How to read this: the surplus is what's left after every essential is paid for. It's the money we can put toward the kids, giving, or retiring early. Pensions and Social Security aren't counted yet, so the surplus is on the conservative side.

What if... (stress tests)

Each line re-runs the full picture with one thing changed. A positive surplus means essentials are still covered.

SCENARIO	SURPLUS	VS. BASE	
Base: both work to 65	\$1,942,997		✓ covered
Both retire at 60	\$1,469,690	-\$473,307	✓ covered
Both retire at 67	\$2,092,757	\$149,761	✓ covered
Alex leaves salaried work in 5 yrs (side business at \$0) example	\$545,369	-\$1,397,628	✓ covered
Alex leaves salaried work in 10 yrs (side business at \$0) example	\$983,447	-\$959,550	✓ covered
Markets fall 30% (investments, retirement, 529)	\$1,822,517	-\$120,480	✓ covered
Everyday spending runs 10% higher	\$1,818,676	-\$124,320	✓ covered
The unaccounted \$51K/yr is spent, not saved	\$484,315	-\$1,458,682	✓ covered

Each line re-runs the lifetime balance sheet as a single path. The odds for retirement come from the market simulation (see Retirement: how the plan grows), under both outlooks.

Market assumptions

ASSET	REAL RETURN	HOW IT'S BUILT
US stocks	4.4%	dividend yield 1.15% (2025) + real earnings growth 3.26%/yr (1960–2025); assumes no change in valuations
Bonds	2.9%	10-year TIPS real yield 2.88% (FRED DFII10, Oct 1, 2026)
Cash	1.5%	3-month T-bill 3.94% less 5-year breakeven inflation 2.37% (FRED TB3MS, T5YIE, Sep 1, 2026)

Fetches Oct 4, 2026 from public sources: FRED CPIAUCNS (CPI-U, NSA), December to December; Damodaran, NYU Stern, histretSP.xls (1928–2025); Damodaran, NYU Stern, histimpl.xls: S&P 500 dividend yield (2025) and earnings 1960–2025. Other asset classes keep fixed spreads to these.

RETIREMENT ACCOUNT	DEFAULT	USED	WHY
Rollover IRA ...2002	4.2%	4.2%	default, from current holdings
Roth IRA ...2003	4.7%	4.7%	default, from current holdings
Workplace 401(k) ...3001	3.8%	3.8%	default, from current holdings
Sam's 403(b)	—	3.5%	set in the profile (no holdings data to build a default)

Notes (assumptions, sources, method)

Assumptions

ASSUMPTION	VALUE	SOURCE
Ages	Alex 40, Sam 39, Older child 8, Younger child 4	demo
Retirement age (base)	65 (also tested: 60, 67)	household
Plan to age	95	Longevity buffer
Tax on pay	21.6% of gross, from the tax model (Taxes and take-home)	From the assumptions pack: federal 2026, state flat-rate fallback
Real raises: Alex	+2.0%/yr to age 50, +0.5%/yr to age 55, +0.0%/yr after that	assumptions pack
Real raises: Sam	+0.8%/yr throughout	assumptions pack
Discount rates (real)	Alex base salary 4.0%, Alex annual bonus 6.5%, Alex 401(k) match 4.0%, Sam salary 3.8%. Essential spending 2.8%, education 4.0%.	
College, older child	public in-state: \$30,000/yr × 4, starting in 9 yrs	assumptions pack (College Board averages)
College, younger child	half of public in-state: \$15,000/yr × 4, starting in 13 yrs	assumptions pack (College Board averages)

Data freshness

- Sam's 403(b): stated Sep 15, 2026 (16 days old)

Method

The family (extended) balance sheet, which adds human capital and the present value of lifestyle and goals to the explicit balance sheet; goals-based planning (describe → quantify and prioritize → subportfolios → manage), and liquidity and cash-flow planning. All implicit values are real (after inflation), with mid-year discounting. Human capital is after-tax pay to retirement. An employer match is counted pre-tax because it goes straight into the account. No side income counted.

Not included yet

- Social Security. These would add to the surplus.
- A split of spending into essential and discretionary. Right now all of it is treated as essential, which is conservative.
- Real tax modelling, health insurance before Medicare, and probability of success per goal.
